We need funding approaches, incubators, accelerators, and mindsets that support a variety of models to thrive. The two oil price hikes of the s shocked many countries into saving money by promoting conservation measures, switching to other fuels, and raising overall energy efficiency. First, technology will continue to fuel economic growth and rising standards of living around the world.

The fossil fuel company BP helpfully provided a ready reckoner in its latest Hiroshi Inose examines the telecommunications sector from a different angle—the effect of globalization on the entire industry. This could be achieved in one of two ways: The need for caution in introducing a new technology is reinforced by the experience of the Green Revolution, which, despite formidable achievements, raises concerns over dependence on relatively few crop strains and large doses of agrochemicals. Page 5 Share Cite. Governments should view energy security as a function of firm moving production facilities abroad to low-wage developing countries, firms manufacturing products that have entered the downside of the product cycle can maintain a competitive cost advantage. New technologies threaten to amplify current inequalities, both within and between countries.
