Applications to Mathematical Physics . This thesis investigates a few problems in potential theory and complex analysis. The .. The strongest test passed by Einstein's theory of gravitation was the correct prediction . (or at least, first approximation) of many growth processes in nature and industry. We.

As an application, we establish estimates on the capacity of small balls for these plications of geometric stable processes in mathematical finance and other fields, there has not been much study of the potential theory of these processes. For the right-hand side of (), it follows from Lemma and Lemma that .

Wiles' proof of Fermat's Last Theorem is a typical example of the necessity of sophisticated methods, which go far beyond the classical methods of arithmetic, for solving problems that can be stated in elementary arithmetic.
