Java is a statically-typed language. In the end, it's all down to speed.

The truck is better for some things, the sports car for. Great article, python

What follows is an edited version of the comment. AppTrends

Sign up for our newsletter. I am a very defensive assertive

programmer and Static Types form a valuable part of my defensive programming style, and along with dynamically coded assertions, allows me to programmatically prove my execution paths as correct, not to mention the clarity it provides when I or anyone else reads that code a year later.

In all fairness, there are compilers out there that deliver far better error

we have stringent SLA's in our airline reservation system and

we do not feel we have to worry at all about the GC issue.
