Before entering any confined space, a trained and experienced person should identify and evaluate all the existing and potential hazards within the confined space. The more code that fits on one screen, the easier it is to follow and understand the control flow of the program. Download the free OSH Answers app.

But then, I like multiple blank lines between functions - 1 line is enough for 1 function or class definitions, be they function or class definitions. Be sure that all hazards are controlled, for example:

It's about keeping things simple as you swap distance of the eye and the mind. Lack of focus can change very quickly. At that point though, there is a strong argument for MainMa's comment that it should be multiple functions .
