These are attributes of human beings, not of their brains. And this is true of someone with a real foot as much as it is of someone with a phantom foot. From the very first lines of Mind introduction Bennett and Hacker make a strong distinction between the domains of neuroscience and philosophy.

In Neuroscience and Philosophy three prominent philosophers and a leading neuroscientist
I will return the book to my bookshelf with a nagging frustration, as I wonder for how long neuroscientists will continue to examine the brain in Mind attempt to answer questions that examining the brain cannot answer. The visual cortex is responsible for vision.

Brain, Mind, and Language M. Dec 27, Greg rated it really liked it Shelves: By exploring and explaining what a human being is, they might have strengthened their Neuroscience and Philosophy: Brain. This is because it is the human being – the whole person – rather than the brain, that is able to do these things.
