Cleaning and Disinfection of Primary Enclosures. The use of randomly bred and genetically defined animals in biomedical research. Comparative activity of fenoxycarb and hydroprene in sterilizing the German cockroach Dictyoptera:

To the greatest extent possible, activities that might be noisy should be avoided.

Monitoring of sanitation practices should be appropriate to the process and materials being cleaned; it can include visual inspection of the materials, monitoring of water temperatures, or microbiologic monitoring. Cleaning utensils themselves should be cleaned regularly and should be constructed of materials that resist corrosion. Animals sometimes have to be trained to use automatic watering devices.

The most commonly used laboratory animals are nocturnal. A strategy for achieving desired housing should be developed by animal care personnel with review and approval by the IACUC. Ankit has also been recognized by many news channels and newspapers around the United States as well as internationally for his various achievements in a number of fields.
