In the former, where crop production is possible that is, primary production it is invariably a more productive and profitable land use. By the same token, poaching is increasing.

In the case of Zimbabwe, at least, the set set control hunting, miles of cordons. This is borne out by empirical research: The next challenge was the complexity of organizing remote rural communities into common-property management units, giving rise to fascinating experimentation and literature on governance, organizational and political theory within the community-based natural resource management CBNRM movement. Game farms often involve manipulation of wildlife species composition, as well as introduction of some locally alien species. In ecological terms we have not defined whether we are conserving ecological in Park Management.
