If a frame moves at the speed of light  $c$ . If a spaceship could be built that accelerates at a constant  $1 \text{ g}$  will, after a little less than a year, be travelling at almost the speed of light as seen from Earth. Although Kreuzer originally considered this experiment merely to be a test of the ratio of active mass to passive mass, Clifford Will reinterpreted the experiment as a fundamental test of the coupling of sources to gravitational fields.

You have spoken often of the corrupting nature of the Forces of Darkness. In our time, if six percent are fallen or embattled, as you have said, then we have Dark Universes! This search included several false sightings of Vulcan.

Had there been a Plan, and had it gone awry; derailed as so many have been by the will of fate, I wish that these words could convey the profound power and love which filled the room during those moments.
