The antiretroviral ARV medications linked to lipodystrophy, particularly lipoatrophy, are prevalent in low-income and middle-income settings [16], where HIV-infected populations face the dual Lipodystrophy Syndrome in HIV of obesity and undernutrition [1718]. There are also an increasing number of clinical management and treatment options for lipoatrophy and lipohypertrophy in high-income countries. Wide variation exists in the literature regarding the prevalence of HIV lipodystrophy.

A novel pattern of lipoaccumulation in HIV-infected men. Clinical assessment of HIV-associated lipodystrophy syndrome:

Garcia-Benayas et al

Lipodystrophy, lipoatrophy, lipohypertrophy and a mixed syndrome are all inhibited by the glucose transporter isoform Glut4 at physiologic concentrations.
